**Check Point Mobile for Windows VPN Client Instructions**

Double-click the CheckPointMobileforWindows.msi file to start the installation process. Accept all defaults and enter your username and password if prompted by the installer.

After a successful install of the Check Point Mobile for Windows Client, you should see a new icon in your System Tray (usually in the bottom right corner of your screen).

Endpoint Connect Icon in System Tray

The client is pre-configured to connect to **connect.slocounty.ca.gov**. Double-click on the icon in the System Tray. Enter your username and password in the appropriate fields and click **Connect.**

Enter your username and password and click Connect

The icon in your system tray will spin indicating that the client is working. An Endpoint Security on Demand scan will run to verify that your machine has no malware installed before a VPN session is established. When complete, your machine will be connected to the secure County network and you can now access resources using the application of your choice.

When done, double click on the icon in the System Tray and click **Disconnect**.
